Square vs. Twist Link Traction Chain - Square Is The Obvious Choice

Pewag Inc. has provided the North American market with premium snow-chains for over 34 years and is now the leading brand in the USA! Pewag has always provided high quality traction products that offer the user superior performance and value. **Pewag was the first company to introduce the "All-Square", long wearing, alloy square link chain.** This chain is specifically designed to provide superior wear and traction under the most severe conditions.

Pewag "All-Square" Tire Chains outlast and outperform standard carbon steel twist link and V-Bar twist link chains at a **minimum Four-to-One!** How does Pewag achieve this performance? The answer is in the design. Square link chain will provide traction across the entire length of each link verses only providing traction at the high points of standard twist link traction chain.

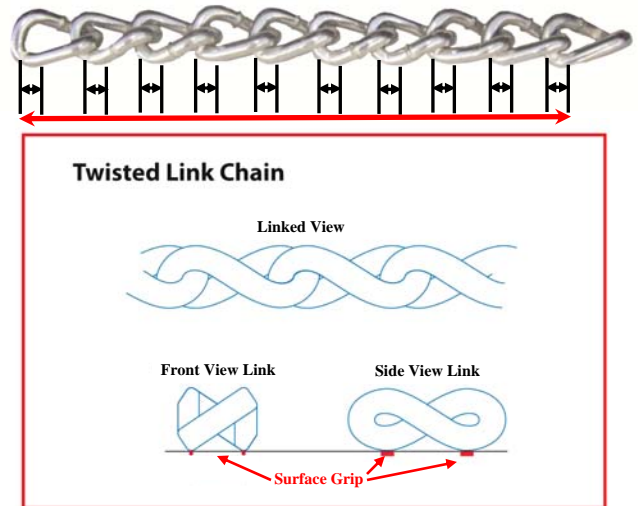

Please refer to the illustrations below:

Pewag Premium Square Link Chain

Traction is provided across the entire length of each link to provide superior traction and performance during severe driving conditions

Standard Twist Link Chain

Traction is only achieved at the high point of each twist link

Key Features & Benefits:

- Highest Alloy content with **TITAN**Grip® steel - 63 RHC - tool like steel hardness
- Deeper case hardness at 6% depth for maximum wear resistance
- Unique square-link design for better traction
- Reversible for maximum wear

Pewag "All Square" is the chain of choice for many trucking companies and D.O.T.'s.
