MEET THE TOUGHEST ICE STUD YOU CAN BUY

MaxiGrip Ice Studs

The MaxiGrip ice stud has been developed for working vehicles and footwear for use in icy, winter conditions. It is intended for off-road and working vehicles.

The MaxiGrip ice stud has been designed to be installed and removed as conditions and seasons require. The MaxiGrip ice stud consists of a hardened and galvanized screw with a Carbide tip cemented the depth of the hexagonal head for durability and superior traction.

The MaxiGrip ice stud is easy to install. It is also easy to remove, even after prolonged usage. In contrast to traditional studs, MaxiGrip leaves a minimal mark in the rubber and can be reused, season after season.

There is a wide range of applications that the MaxiGrip ice stud can be used for, including: tractors, loaders, dumpers, trucks, ATVs, scooters, compact loaders and mini tractors as well as boots.

MaxiGrip Ice Studs are available in 5 sizes, see below for [packaging](#) information.
